

## Interleaved practise

Year 1, week 3

Number:

1. Starting at 11, count in 2s until you get to 25.

*Your child should say 11, 13, 15, 17, 19, 21, 23, 25*

2.  $12 - 5 = 7$

3. What number is 10 more than 19?

*29*

4. Write the number 18 in words.

*Eighteen*

5. Share 15 counters equally between 3 people. How many does each person get?

*Any drawing that shows that each person gets 5 counters*

Measurement/Geometry:

6. Find a cup or jug with a small capacity or volume (it doesn't hold much). Find one with a bigger capacity or volume.

*Your child can directly compare capacity by pouring water from one cup into another. Ask your child to explain why one holds more than the other and how they know.*

7. What time will it be at lunch time?

*Any reasonable answer*

8. Describe how to get from your bedroom to the kitchen. How many steps are needed?

How do you have to turn?

*Encourage your child to actually do this and describe the steps and turns as they happen. You can write it down for your child.*

Chance/Data:

9. What can you tell from the information in the graph?

*Examples:*

- More people like blue*
- Yellow is the least popular colour*
- 17 people answered the question*
- 3 more people like red than like yellow*
