At-Home Investigation

Area is a measure of flat space. Today you will compare the area of the top of your dining table or desk with the area of the mattress on your bed.

Does your mattress or your table have more area?

How many pieces of paper would it take to cover the top of your dining table? How many pieces of paper would it take to cover the mattress on your bed? Explain your plan for working it out.

Carry out your plan and explain your findings:

Which one has the greatest area? By how much? How do you know? Draw what you found out on the next page. The boxes are scaled to represent A4 pieces of paper.

Account for difficulties:

How did you account for partial pieces of paper? How did you make sure that your measurements were accurate?

Explain your plan:

Try out your ideas. Use this space to record any problems that you have along the way, and what you do to fix them.

Attach a photo here or draw what you made:

Is there a way that you could use an array to calculate how many of the rectangular or triangular tiles it would take to cover the box?

Understanding and Communicating:

Describe your tiling pattern: Look at how many tiles you have used in each row. What patterns can you find? Is there a way that you could work out how many there are without counting them all?

Manipulation problems:

Level 1: You decide to tile the next two floors as well. They are the same shape and size as the floor that you have just tiled. How many tiles do you need now? Explain:

Level 2: Each tile costs 10c. How much money would it cost to tile all three floors? Write a number sentence to explain:

Date:

Problem solving / T&R:

- Problem solved with minimal or non-mathematical prompting
- Some leading questions were used to prompt thinking
- Solved after explanation
 Did not work out solution
- N/A- not a novel problem

Reasoning / Comm.: (verbal, written, working and equations,

- or visual representations)
- Clearly and logically reasoned
 Easily understood
- Understood with some
- interpretation neededSome gaps but on topicMinimal or off topic

Understanding / Reflect:

- Connected manipulation problems to previous questions and
- answered easily
 Connected manipulation problems to previous questions with some prompting, and answered
- correctly
 Answered once the similarities to previous questions had been pointed out
- Had some problems in answers but was on the right track
- Did not answer appropriately
- Student not observed

Shapes to cut out:

E7. Measure area in square m and square cm

The area of something means how much flat space it takes up. Answer the questions below.

- 1. How could you use the grid provided to measure the area of small things? Explain how:
- 2. Estimate first, then measure the area of the following shapes using your grid.

Optional extension task:

Do any of the rooms in your house have tiles, or have a rectangular/square pattern? If so, write the name of the room and the number of tiles/squares/rectangles. How did you work it out?

Interleaved practise

Year 5, week 5

Number:

1. Write a number pattern using multiples of 9, beginning with the number 18.

- 2. Use rounding to find approximately how much you would pay in total for items costing the following amounts: \$137, \$82 and \$309
- 3. 126 ÷ 3 = Show how you worked it out.
- 4. Show where these fractions would go on the number line: 0.2 $\frac{1}{4}$ $\frac{1}{2}$ 0.4 0 1
- 5. Write 3 fractions that are equivalent to 2/5 and show how you worked it out.

Measurement/Geometry:

6. What units of measurement would you use to measure the following items?

	The length of a sports field	How long it takes to walk to the shop
	The distance to another city	The amount of water in a teapot
7.	I want to plant my rectangular	7 metres
	garden with shrubs that need a	

garden with shrubs that need a space that is 1m². How many shrubs could I plant? Show where each one would be planted.

8. How much garden edging will I need to enclose the garden (from question 7)? If the edging is sold in 5 metre lengths, how many lengths will I need to buy?

Chance/Data:

9. You have been asked to plan the meals for your family for the next week and want to include meals that the greatest number of family members like. Write 3 questions you could ask to help you decide.

E6. Area of a rectangle

Use the following examples to help you to work out a rule for finding the area of a rectangle.

Rectangle	Base measurement	Height	Area	What is the rule?
А				
В				
С				
D				
Е				
F				
G				

What is the rule for finding the area of a rectangle?

BACKWARDS QUESTION:

If the area of a rectangle was 12, what could its perimeter be?
